| <p>Picture</p> |  |
| <p>Brief Description</p> | <p>The Summit-XL is a very flexible robot able to be remote controlled or navigate autonomously providing very useful information through its different components.</p> |
| <p>Main Functionality</p> | <p>It will provide the First Responders with a virtual reconstruction of the emergency scene. The data collected by the robot will be analysed live by the First Responders and used to optimize the rescue strategy.</p> |
| <p>Main Capabilities</p> | <p>The robot integrates different components like cameras, lasers or routers. With those the robot is able to communicate through 4/5G the data obtained live and also be remote controlled and explore the different areas of interest.</p> <p>With help of its GPS it is also possible to enable the robot to navigate autonomously.</p> |

RESPOND-A has received funding by the European Union’s Horizon 2020 – Research and Innovation Framework Programme, under grant agreement no 883371.
